Esri (Environmental Systems Research Institute, Inc.)	Esri applies the Science of Where to unlock data's full potential in every organization. We continue to pioneer real-world problem solving using geographic information systems (GIS). Using this powerful platform to reveal deeper insights in their data. Esri Users are creating the maps that run the world.	45	With ever-increasing regulatory compliance issues, paired with reduced budgets and limited resources to operate and maintain today's complex water utilities - operators, administrators and managers are relying more heavily on technology. Geographic Information Systems, or GIS, is a tool that is becoming commonly used by everyone in water organizations to provide current information about system assets, enable efficient system planning, facilitate system operations and maintenance, and enhance customer services. We will be covering the advantages of transitioning from using paper or static maps to a Web GIS platform for managing water systems and demonstrating how a Web GIS platform can help meet many of the common business challenges of water utilities such as aging infrastructure, water loss and recovery, emergency response, and communication and transparency with customers.	www.esri.com
